

What languages should you NOT learn in 2019?

www.zdnet.com/article/programming-languages-dont-bother-learning-these-ones-in-2019/ “Codementor, a startup that connects developers with questions to developers with answers, has created a list of the **worst programming languages to learn**, based on community engagement, growth, and the job market.

Last year, the company decided that Dart, Objective-C, CoffeeScript, Lua, and Erlang were the top five programming languages not worth learning.

This year, the company focused on which languages aspiring developers should not learn as a first programming language. For this reason, it excluded the top three most popular languages: JavaScript, Python, and Java. **The company's data suggests that languages to not bother learning this year are Elm, CoffeeScript, Erlang, and Perl.** Kotlin, a popular language for building Android apps, rose from 18th place to 11th place on Codementor's worst-to-best list, while Dart was named the "most improved" language.”

Worst Programing Languages: Ranking Changes			
What Not to Learn in 2019			
	Overall Ranking (2018)	Overall Ranking (2019)	
1	Dart	Elm	↑ 7
2	Objective-C	CoffeeScript	↑ 1
3	CoffeeScript	Erlang	↑ 1
4	Erlang	Lua	↑ 1
5	Lua	Perl	↑ 2
6	Clojure	Clojure	
7	Perl	Elixir	↑ 2
8	Elm	Objective-C	↓ 6
9	Elixir	Haskell	↑ 1
10	Haskell	Scala	↑ 2
11	Rust	Kotlin	↑ 7
12	Scala	R	↑ 7
13	C	Rust	↓ 2
14	Ruby	Dart	↓ 13
15	Go	Typescript	↑ 1
16	Typescript	C	↓ 3
17	Swift	Go	↓ 2
18	Kotlin	Ruby	↓ 4
19	R	Swift	↓ 2
20	C#	C#

Scheme Recursive Art Contest

Joining Tables

Reminder: John the Patriotic Dog Breeder

```
CREATE TABLE parents AS
SELECT "abraham" AS parent, "barack" AS child UNION
SELECT "abraham"      , "clinton"      UNION
SELECT "delano"        , "herbert"     UNION
SELECT "fillmore"      , "abraham"   UNION
SELECT "fillmore"      , "delano"   UNION
SELECT "fillmore"      , "grover"   UNION
SELECT "eisenhower"    , "fillmore";
```

Parents :

Parent	Child
abraham	barack
abraham	clinton
delano	herbert
fillmore	abraham
fillmore	delano
fillmore	grover
eisenhower	fillmore

Joining Two Tables

Two tables **A** & **B** are joined by a comma to yield all combos of a row from **A** & a row from **B**

```
CREATE TABLE dogs AS
  SELECT "abraham" AS name, "long" AS fur UNION
  SELECT "barack"      , "short"      UNION
  SELECT "clinton"     , "long"       UNION
  SELECT "delano"       , "long"       UNION
  SELECT "eisenhower"  , "short"      UNION
  SELECT "fillmore"    , "curly"      UNION
  SELECT "grover"       , "short"      UNION
  SELECT "herbert"     , "curly";

CREATE TABLE parents AS
  SELECT "abraham" AS parent, "barack" AS child UNION
  SELECT "abraham"      , "clinton"  UNION
  ...;
```

Select the parents of curly-furred dogs

```
SELECT parent FROM (parents, dogs)
  WHERE child = name AND fur = "curly";
```

Aliases and Dot Expressions

Joining a Table with Itself

Two tables may share a column name; dot expressions and aliases disambiguate column values

```
SELECT [columns] FROM [table] WHERE [condition] ORDER BY [order];
```

[table] is a comma-separated list of table names with optional aliases

Select all pairs of siblings

```
SELECT a.child AS first, b.child AS second
FROM parents AS a, parents AS b
WHERE a.parent = b.parent AND a.child < b.child;
```

First	Second
barack	clinton
abraham	delano
abraham	grover
delano	grover

Example: Grandparents

Which select statement evaluates to all grandparent, grandchild pairs?

- 1 `SELECT a.grandparent, b.child FROM parents AS a, parents AS b
WHERE b.parent = a.child;`
- 2 `SELECT a.parent, b.child FROM parents AS a, parents AS b
WHERE a.parent = b.child;`
- 3 `SELECT a.parent, b.child FROM parents AS a, parents AS b
WHERE a.child = b.parent;`
- 4 `SELECT a.grandparent, b.child FROM parents AS a, parents AS b
WHERE a.parent = b.child;`
- 5 None of the above

Joining Multiple Tables

Multiple tables can be joined to yield all combinations of rows from each

```
CREATE TABLE grandparents AS
  SELECT a.parent AS grandog, b.child AS granpup
  FROM parents AS a, parents AS b
  WHERE b.parent = a.child;
```

Select all grandparents with the same fur as their grandchildren

Which tables need to be joined together?

```
SELECT grandog FROM grandparents, dogs AS c, dogs AS d
  WHERE grandog = c.name AND
        granpup = d.name AND
        c.fur = d.fur;
```

Example: Dog Triples

Fall 2014 Quiz Question (Slightly Modified)

Write a SQL query that selects all possible combinations of three different dogs with the same fur and lists each triple in *inverse* alphabetical order

```
CREATE TABLE dogs AS
  SELECT "abraham" AS name, "long" AS fur UNION
  SELECT "barack"      , "short"      UNION

CREATE TABLE parents AS
  SELECT "abraham" AS parent, "barack" AS child UNION
  SELECT "abraham"      , "clinton"  UNION
  ....;
```

Expected output:

```
delano|clinton|abraham
grover|eisenhower|barack
```

(Demo2)

Numerical Expressions

Numerical Expressions

Expressions can contain function calls and arithmetic operators

```
[expression] AS [name], [expression] AS [name], ...
```

```
SELECT [columns] FROM [table] WHERE [expression] ORDER BY [expression];
```

Combine values: +, -, *, /, %, and, or

Transform values: abs, round, not, -

Compare values: <, <=, >, >=, <>, !=, =

(Demo3)

String Expressions

String Expressions

String values can be combined to form longer strings

```
sqlite> SELECT "hello," || " world";  
hello, world
```

Basic string manipulation is built into SQL, but differs from Python

```
sqlite> CREATE TABLE phrase AS SELECT "hello, world" AS s;  
sqlite> SELECT substr(s, 4, 2) || substr(s, instr(s, " ")+1, 1) FROM phrase;  
low
```

Strings can be used to represent structured values, but doing so is rarely a good idea

```
sqlite> CREATE TABLE lists AS SELECT "one" AS car, "two,three,four" AS cdr;  
sqlite> SELECT substr(cdr, 1, instr(cdr, ",")-1) AS cadr FROM lists;  
two
```

(Demo4)
